Cloud Maturity Model

Minimise risk and maximise return by validating your organisation’s cloud readiness and roadmap.

What we do

Cloud computing is gaining momentum as a mainstream IT delivery model. As a result, business and IT decision-makers need pragmatic advice to help them define and deliver their cloud strategy. Cloud comes in a variety of delivery models: it can be private, public or hybrid; on-premise or off-premise; it can encompass software, infrastructure or services.

With 30 years of IT infrastructure experience, Computacenter brings clarity to the cloud and helps organisations validate where, and how, to start their journey. Drawing on numerous customer engagements and our 10-year experience of delivering highly scalable virtualised and automated IT environments, we have developed a unique Cloud Maturity Model that provides an independent assessment of cloud readiness.

From an initial assessment, Computacenter will assess key factors, such as IT strategy, risk profile and strategic goals against our maturity model to help determine your organisation’s cloud roadmap.

The maturity model assessment is developed and delivered through a full or half-day workshop with our cloud experts, who will review your approach, goals and any adoption barriers.

Following the assessment and workshop, a detailed report will be provided, including a cloud maturity review and recommendations based on your current state and future goals. These recommendations could vary from immediate adoption of public, private or hybrid cloud solutions to operational issues that need to be addressed to facilitate future cloud adoption, for example establishing greater governance and automation.

This is one of our many assessment services encompassing the entire IT infrastructure, which provide customers with pragmatic advice, a clarity of approach and a realistic sequenced action plan to meet strategic goals.

Computacenter offers independent advice across a broad range of products, suppliers and services to a wide customer base – from small companies and local councils to central government bodies and FTSE 100 businesses.
How it helps
Computacenter’s Cloud Maturity Model enables organisations to cut through the market hype to make an informed decision about how cloud computing can benefit their business.

Cloud is far from a ‘done deal’, and there are many practical considerations that need to be addressed to ensure you realise the expected – and best - outcomes. In some instances, cloud is not the right approach.

From our maturity assessment, you will have the insight needed to develop a cloud business case that is aligned to your organisation’s strategic goals. As a result, you will be able to:

Maximise return: Our readiness assessment will enable you to determine the business areas and applications that are best suited to a cloud-based delivery model. As a result, your organisation will be able to take rapid advantage of the cost and agility benefits offered by cloud computing, which will benefit both profitability and competitive advantage.

Minimise risk: By working with Computacenter, you will be able to make the right choices about your cloud solutions and suppliers. This will help to prevent critical data and applications from being exposed to security and service outage risks. It will also prevent your organisation from becoming locked into an inappropriate or expensive contract with a public cloud provider.

Optimise cost: The promise of cloud ultimately is for cheaper IT. With Computacenter’s Cloud Maturity Model, you will be able to balance projected savings with the cost of change to ensure your organisation achieves the best financial outcome and doesn’t incur any hidden expenses.

Why Computacenter?
Computacenter has 30 years’ experience of managing IT infrastructures on behalf of its customers. For the last 10 years, we have been at the forefront of helping organisations realise the potential of virtualisation, automation and self-service technologies to develop dynamic IT environments.

Our Cloud Maturity Model draws on this proven track record as well as our cross-vendor knowledge of the cloud market to provide an exhaustive evaluation of cloud readiness. By partnering with Computacenter, you will be able to take a phased, lower risk and pragmatic approach to cloud computing.

We offer:

Independent advice: Computacenter and its Cloud Maturity Model are vendor and platform agnostic. We won’t try to sell you a specific cloud solution. We will help you cut through the cloud confusion to find the best option for your organisation – whether it is private, public on- or off-premise or a hybrid environment. We will even advise you if your organisation is not ready for cloud and provide you with a roadmap for future adoption.

End-to-end expertise: Selecting the right solution is just the beginning of the cloud journey. There are also far-reaching operational and cultural ramifications that need to be addressed. With extensive infrastructure skills and industrialised processes, Computacenter can support your organisation through the entire cloud lifecycle – from migration and service transfer to ongoing management and optimisation.

Flexible cloud portfolio: We understand that there is no ‘one-size-fits-all’ for the cloud, which is why we offer services as a cloud builder, provider and integrator. This end-to-end aggregator approach is unique in the market and provides our customers with unrivalled choice as well as consistency and control.

What are the next steps?
