

OUR PARTNERSHIP WITH YOU MEANS THE WORLD TO US

It means the world to our customers too, literally, when it comes to Sustainability. Giving our customers confidence that we're committed to being a sustainable, responsible business provides a strong foundation for earning long-term trust. As a valued partner, we know that this is important to you too, so we want to share with you how we're approaching our Environmental, Social, and Governance responsibilities and initiatives at Computacenter.

Our Sustainability Strategy, 'Winning Together for our People and our Planet', is our framework for driving sustainability in everything we do. It has three workstreams: People, Planet, and Solutions. The Strategy is driven by our CEO, Mike Norris, and has Executive owners for each of the workstreams. Through this, we focus on the areas where we can make the biggest difference.

PEOPLE

We are passionate about people – our people, your people, **all people!** Our people workstream leads how we develop and support Computacenter's people and help take care of those around us too. From community outreach and diversity & inclusion, to antibribery and abolishing modern slavery, we have policies, programmes, and initiatives in place that all underpin one of our core values – understanding people matter.

Are you passionate about people too? **Let's talk.** We love sharing ideas and collaborating with our partners.

In the meantime, you'll find a bit of light reading about some of our excellent People initiatives [here](#).

PLANET

We're normally a fairly humble organisation, I'm sure you'll agree... But when it comes to the planet, we have to admit, we're pretty proud. And while pride can often come before a fall, we can live with that when it's a fall in emissions.

In 2022, Computacenter became CARBON NEUTRAL across Scopes 1 & 2 emissions. We're amongst the leaders in the industry for this achievement. You should see our solar arrays – they're dazzling - and they've played a big part in achieving this milestone. We've also set a 2040 Net Zero target, achieved a CDP rating of B in our most recent assessment, and we're now committing to SBTi's most ambitious goal of limiting global warming to <1.5°C.

The hard part lies ahead. For Computacenter, reducing our Scope 3 emissions relies extensively on everything up and down stream of us – after all, we don't make anything! So, we need our partners and our customers to help us achieve our Planet goals.

There are so many ways you can help us – whether it's through reuse and recycled materials, transparent reporting, eliminating single-use packaging...the list goes on.

You probably don't need to reach out to us to start a conversation about this – chances are we'll be calling you! But if you do want to get in touch, you can do that [here](#).

And while you're waiting to hear back from us, why not do a bit of [background reading](#)...?

SOLUTIONS

It will come as no surprise to you that Sustainability has been rapidly creeping up our customers' agendas. Increasingly we're seeing procurement decisions being influenced - and sometimes led - by the sustainability of the outcome. External and internal pressures have shifted it from a benefit to a necessity.

Sustainability in our solutions can take many forms – economic efficiency, sustainable innovation, supporting the Net Zero journey, supply chain transparency...and so on...the good news is, we really understand our customers and what success means to them, so we're in a great position to help them achieve their goals.

The even better news is that our partners are fundamental to our solutions – you can help us **help our customers change the world**. Our range of sustainable solutions leverage our investments in carbon neutral scale and extensive expertise, which combined with the right partnerships, make us an unstoppable team with unbeatable results.

How can you help? Share your sustainability journey with us! Help us select the products best suited to our customers' sustainability goals. Throw open your doors to create a truly transparent supply chain (or just send us some data).

Get in touch [here](#) or read more [here](#).

We already know this is a subject close to your heart, so we're excited to share our Sustainability Strategy with you and have you join our journey to a better future. In the meantime, let's make sure that 2023 is the year that we really do **win together for our people and our planet**.

Thank you for your partnership.
