

VIRTUAL DESKTOP MOVES TO THE CLOUD

We are all accustomed to the traditional VDI infrastructure to connect:

To keep them productive in ways that physical desktops struggle to

ORGANISATIONS ARE NOW FINDING THAT...

- They have a physical Disaster Recovery environment that needs updating, patching, and refreshing
- After upgrading to Windows 10 and Office 365 there's a requirement for additional capacity
- The existing hardware platform is coming up for refresh and they want to look at alternatives
- They may now look to close/downsize their data center footprint
- Applications are increasingly being migrated to the cloud

THE TRADITIONAL VDI INFRASTRUCTURE ALREADY IN PLACE MAY NOW HAVE REACHED ITS LIMITATIONS...

Reliant on physical hardware

Bound by capacity limitations

Expensive and time consuming to expand and manage

TO COUNTER THIS, ORGANISATIONS ARE NOW LOOKING AT OPTIONS TO MOVE THEIR VDI INTO THE CLOUD...

...PROVIDING THE OPPORTUNITY TO:

Scale up or down according to demand

Enhance business continuity and disaster recovery strategies

Take advantage of globally disparate locations

Reduce support costs
Reduce CAPEX investment

LIFT YOUR VDI PLATFORM INTO THE CLOUD WITH CITRIX CLOUD

NOTE: Cloud VDI is not always right for every situation as not every workload is suitable for public cloud.

A mature platform proven to work at scale

Advanced monitoring and user performance insights

Simplifies extension of your current platform to any public cloud

Fully certified to work with Microsoft Teams

Enables you to determine what to move to the cloud and what to keep on more traditional platforms.

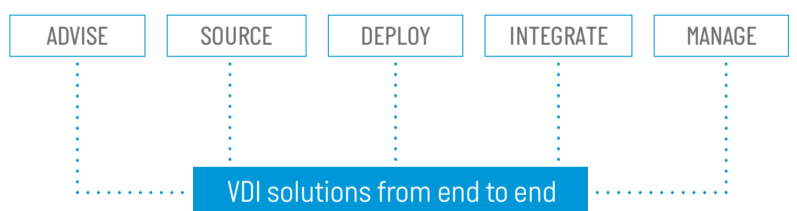

COMPUTACENTER'S CLOUD DESKTOP ACCELERATOR SERVICE

We will:

- ✓ **IDENTIFY** cloud desktop use cases and solution cost implications
- ✓ **REVIEW** current virtual desktop architecture
- ✓ **ANALYSE** application deployment and modernisation strategy
- ✓ **CONSIDER** hybrid cloud strategies and disaster recovery provision
- ✓ **REVIEW** endpoint security and remote access solutions
- ✓ **PROVE** the solution in your environment

Then work with you to scope and plan a pilot phase and onto full deployment.

We can:

This will enable you to:

Reduce costs

Accommodate business change

Increase user satisfaction
