

HELPING CIVIL AVIATION OPTIMISE THEIR M365 AND IMPROVE SECURITY

OBJECTIVE

As part of its Digital Transformation agenda, the CAA wanted to optimise Microsoft 365, but to do so, they needed to migrate users from Windows 7 to Windows 10. This was also an opportunity to improve security and minimise disruption for future Operating System upgrades. The CAA were looking for a partner to perform the design and build of both Windows 10 and Microsoft SCCM, and to then procure and deploy appropriate workplace devices or replace the hard disks of existing devices to accommodate Windows 10.

SOLUTION

Based on many years of a successful supplier and partner relationship, the CAA selected Computacenter to deliver the following:

- To replace Sophos, CAA's current anti-virus solution, with Microsoft Defender.

OUTCOME

- Information Security considerably improved, while future Operating System upgrades will have minimal impact upon their employees, thereby reducing the impact to business activities.
- The replacement of the Sophos anti-virus solution with Microsoft Defender, has brought the management of this product within the SCCM Management system, and has reduced licencing costs, as MS Defender is already paid for as part of CAA's E5 licencing.

**DELIVERING SOFTWARE CURRENCY, SECURITY AND
BUSINESS PRODUCTIVITY TO TIME AND BUDGET**
