

REMOTE EXPERT SERVICES

Organisations are increasingly interconnected through global networks. A wider outreach can increase diversity, open new markets and reduce cost.

As organisations scale up to provide greater user flexibility and transform their infrastructure to better serve their customers, access to the right skills at the right time is vital to maintain momentum.

With site access restrictions and an increasingly challenging contractor market contributing to a skills shortage in the UK, being able to leverage the skills of experts on demand will help organisations address their business needs without disruption.

Computacenter's projects and consultancy practice houses highly skilled and experienced experts that can provide local and remote assistance to keep projects and services moving.

We have proven capability and a strong track record:

- Computacenter's certified solution specialists and project managers hold accreditations with all the key infrastructure vendors, including Cisco, EMC, NetApp, HDS, HPE, IBM, Microsoft, Symantec, VCE and VMware
- We can rapidly deploy skills in Unix, Sequel, Linux and Public Cloud
- We are a certified Cisco Master Cloud Builder and were named Cisco's Global Cloud Builder Partner of the Year
- We are HP's PartnerOne EMEA Cloud Solution Partner of the Year, VMware's EMEA SDDC and vCloud Air Partner of the Year and NetApp EMEA Partner of the Year
- Our contractual services portfolio for the agile infrastructure includes more than 40 service lines – from asset management and application packaging to build management and batch processing
- We manage 28,000-plus physical and virtual servers and seven million events for our customers every year
- Our 240-strong consultancy practice has delivered thousands of customer projects
- We have 2,500 build points and can configure 5,000 infrastructure components simultaneously

Computacenter can provide both dedicated resources locally and access to skills on demand remotely to help design, deploy, transform and manage workplace and enterprise solutions. Our flexible resourcing model makes it easy to access the skills you need, when you need them, wherever you are.

COMPUTACENTER FOR REMOTE EXPERT SERVICES

To ensure IT transformation initiatives and investments deliver the right business outcomes, we provide a range of strategy and advisory services. We assess workstyles, business cases and define change roadmaps.

We help customers at every stage of the IT change cycle – from designing and building new environments to integrating and migrating workloads. We simplify change and we accelerate change.

We take a straightforward approach that safeguards continuity, controls costs and puts the user first. Our services are founded on 25 years of global consulting experience and thousands of customer engagements.

With Computacenter's Change & Consult Services, CIOs can deliver the innovation the business wants and the flexibility that users need.

WHY COMPUTACENTER?

- We offer a user centric approach to transformation
- We have 30+ years' experience in IT transformation projects
- We have the skills and solutions to assist at every stage of the transformation journey
- We are sensitive to existing investments, with the capability to integrate new solutions to existing infrastructure
- Economies of scale for the supply of infrastructure services and solutions
