

The corporate perimeter for security controls and protection has been redefined very quickly, and with huge impacts. Users are now out of the visible line of sight, working remotely or from home, often times using devices that are not a fully corporate standard. The security posture of an organisation has had to adapt very quickly to cope with the wider circumstances, and this potentially presents vulnerabilities and threats to businesses that need to be mitigated.

Users have been rapidly equipped to work from home or remotely. New services such as collaboration and document sharing technologies have been established at pace so that users can stay productive and engaged during these new times of working. Businesses have had to do this in order to protect their workforce and keep their businesses operational. There are potential security impacts to this speed and agility that needs to be considered; as remote and home working becomes the new normal, threats will emerge to try to capitalise on this situation by those who aim to disrupt and hurt businesses.

There will be significantly increased pressures on IT Security departments in many organisations to keep the business as secure and protected as they would usually strive to do, protecting corporate assets and information

Computacenter can help with this. With our security practice, we can help you as follows:

Our Security Experts as part of your team

Whilst your own resources are stretched managing the new security and threat landscape, our skilled technical resources can be deployed as part of your team to provide additional capacity to help you cope

Security Assessments

We can help simply in terms of providing advice and recommendations for how to implement or reconfigure security controls to cater for the new landscape you need to manage. This could be basic support to VPN or firewall reconfigurations, through to broader assessments and recommendations relating to security trust or Identity solutions

Managed Security Services

Computacenter provides a comprehensive Managed Security Service already to our customers. If you have additional needs for security support or are too stretched with your current teams — we can support you by providing operational security support as part of your wider service portfolio.

Computacenter believes that all solutions should be inherently secure and connected. With the pace and volume of IT enablement activity recently, it is a reality that there may be more work to do to fully optimise and secure your business. We offer a pragmatic and flexible approach to ensure your security objectives and outcomes are met.

COMPUTACENTER FOR SECURITY

Computacenter is a leading provider of IT infrastructure. We have a dedicated Security practice, but also believe that Security is required intrinsically in every solution. No matter how big or small your security requirement, we can support you with skills and expertise that helps minimise your security risk.
