Maintaining currency of your IT estate is vital to deliver growth, maintain security and equip your employees with the right tools to be productive and effective.

When components or devices go into constraint, deployment programmes slip and the ability to maintain capacity and consistency in your asset estate can have productivity and cost implications.

The world’s leading technology providers rely on Computacenter for our scale and reach, and these partnerships are supported by our investment in the skills and accreditations needed to build the right solutions for our customers.

Through these powerful partnerships, we are able to help our customers access the resources they need to maintain business continuity, enable their workforce and maintain the projects and initiatives that will help them to grow.

Our technology sourcing capability can help you to:

• Access the technology currently available through our own extensive stockholding and close working relationships with vendors and distributors
• Pre-order stock to be held for you in our secure facilities, through our “buy and store” solutions
• Configure and integrate products and services prior to shipment and delivery, reducing the need for local engineering resources and speeding up the deployment cycle
• Select pre-configured bundles for home and remote workers, with project managed deployment to remote and home locations

From analysis and planning to the source and deployment of thousands of products, complete with the reporting and asset controls. We can configure every type of IT infrastructure, from mobile phones to entire data centers, providing the expertise that comes from more than 80 accreditations from leading hardware and software suppliers.

Computセンター for Sourcing

Computacenter helps organisations take a strategic approach to mobility with integrated solutions, optimised security and simplified support. By improving control of the mobile estate, we help organisations enhance collaboration, enable flexible working and deliver a seamless user experience in the office and on the road.

Why Computacenter?

• Helping organisations source and deploy IT solutions for more than 30 years
• Relationships with 1,100 vendors and 4,000 manufacturers
• Our Computacenter Recommends portfolio eliminates the need for product evaluations
• 2,500 build points; configure 5,000 products simultaneously
• Five logistics facilities across Europe to service all geographies
