SEIZE THE AUTOMATION ADVANTAGE

Boost agility and efficiency with smarter network automation.

The business wants higher capacity. The user wants better connectivity. The CIO wants greater consistency. And the network is stuck in the middle. Computacenter helps organisations harness the power of automation, so the network can meet everyone's expectations in a digital age.

MEET INCREASED DEMAND

Enterprise networks are getting busier. From videos and mobile apps to database queries and cloud services, there's a constant battle for connectivity – and a constant risk of performance degradation. For the network to meet increased demand, traffic needs to prioritised, security needs to be maintained, and changes need to be executed. All of which means more work for an already stretched network operations team. Or does it?

By embracing network automation and orchestration, IT departments can simplify the management of increasingly complex infrastructures and dynamic workloads. Goodbye repetitive manual tasks and errors; hello automated workflows and intelligent demand mapping.

TRANSFORM NETWORK OPERATIONS FOR A DIGITAL AGE

Computacenter helps organisations realise the full potential of network automation and orchestration in a digital age. From software-defined access and real-time analytics to multi-vendor orchestration and intelligent security policies, we help organisations transform day-to-day network operations. We simplify configuration. We accelerate provisioning. We optimise utilisation.

Our user-centric, business-focused approach means we don't just look at network automation in isolation. We understand the process, people and policy changes that can come with greater automation – and work with our customers to address them.

ESTABLISH THE RIGHT AUTOMATION FOUNDATIONS

Computacenter helps organisations establish the hardware, software and service foundations needed to embed automation and orchestration across the entire network - wired and wireless, physical and virtual.

Our services include:

- Network automation readiness advisory services
- Sourcing and evaluating different vendor offerings
- Deploying and integrating network automation solutions
- Identifying tasks best suited for automation and orchestration
- Establishing security policies and performance thresholds
- Leveraging network analytics
- Transforming the underlying physical infrastructure
- Network overlay and underlay design and deployment

From discovering topologies and performing root cause analysis to managing bandwidth and safeguarding compliance, we simplify the transition to a more sophisticated network and help customers maximise their investment in automation and orchestration technology.

END-TO-END EXPERTISE

Computacenter's network automation services are founded on 30 years of end-to-end connectivity expertise. Our specialists are skilled in software defined and network infrastructure automation solutions from the leading vendors in the industry and hold more than 300 networking and security accreditations.

We help organisations assess the different vendor offerings, automation protocols and open source frameworks to ensure they achieve the right balance between cost and functionality.

Our Solutions Center enables customers to evaluate automation and software-defined products as well as their impact on network performance and the user experience in a risk-free environment.

LESS COMPLEXITY, MORE CONTROL

Computacenter's network automation services remove complexity and uncertainty and boost consistency and control. We bring greater visibility to the network and make it more responsive to business change.

With greater automation, organisations can get more from their network, their business and their users. By maximising network resources and simplifying day-to-day administration, we help our customers boost productivity and agility.

COMPUTACENTER NETWORK AUTOMATION – ADDED VALUE FOR YOU

FOR THE CIO

- Accelerates change
- Reduces cost and risk
- Frees up staff and addresses skills shortages

FOR THE USER

- Optimises application performance
- Improves productivity and satisfaction
- Increased availability

FOR THE BUSINESS

- Boosts agility and competitive advantage
- Increases quality of service
- Supports digitalisation
