Apple Device Enrolment Programme

With Computacenter's help, organisations can simplify the deployment and management of corporately-owned Apple devices using Apple's Device Enrolment Programme (DEP) which replaces the need for manual configuration.

What we do

As organisations seek to modernise, mobilise and digitise their users, Apple technology is becoming increasingly prevalent in the corporate world thanks to a growing suite of Enterprise applications and seamless integration with Windows-based devices.

Having selected Apple technology, an organisation needs to be confident that their chosen devices are configured and deployed as quickly and seamlessly as possible.

In a more agile and mobile world, traditional deployment methods are changing and organisations need to be certain their devices can be managed and secured effectively.

The DEP provided by Computacenter offers a new way to approach device setup and provisioning. Like all Apple products, DEP is focused on delivering a great user experience. From the first moment when a new iPad, iPhone, or Mac is unboxed and powered on, DEP streamlines the activation process and offers automatic device enrolment and configuration.

DEP is available to organisations who purchase iPad, iPhone, or Mac directly from Computacenter. Organisations need to identify and understand the benefits of DEP before embarking on the 4 step process to use DEP to apply your chosen Mobile Device Management (MDM).

Computacenter advises organisations on DEP readiness and supports the Enrolment, Setup, Configuration and Assign stages as well as sourcing the selected Apple devices.

How it helps

DEP presents organisations and users with an unparalleled Apple experience and a faster, more streamlined way to provision a Mobile Device Management solution to a corporately owned iOS or Mac device.

Wireless Supervision

Supervision provides a higher level of device management for corporately owned iOS devices. It marks the device as being corporately owned and allows for a deeper and more granular approach to management by providing additional device configurations and features, such as web content filtering and single app mode. With DEP it is possible to wirelessly enable supervision mode on a device as part of the setup process.

The Device Enrolment Programme enables you to automatically manage all your institutionally owned devices. While completing the Setup Assistant, the device can be preconfigured to require automatic enrolment into MDM which can also be made to be non-removable by the person using the device. This ensures that devices are configured based on your institution's requirements, and guarantees that all users get the same setup on their devices.

Zero-Touch Configuration

With DEP, large scale deployments of iPad, iPhone, and Mac are seamless for IT. Once the device is activated IT can immediately configure account settings, apps and access to IT services over the air. This removes the requirement for staging services as there is no need to physically access the device as part of setup.

Streamlined Setup Assistant

DEP makes it easier for users to set up their own iOS device. Using an MDM solution, users can be guided through the activation process using the built-in Setup Assistant, this can be streamlined further by automatically skipping certain screens.

Why Computacenter?

Computacenter helps organisations remove the cost, complexity and risk associated with the IT supply chain by simplifying the procurement and deployment of new systems and processes.

We help organisations put Apple technologies at the heart of their contemporary workplace. Whether they form part of a traditional corporate IT deployment or a COPE programme, we ensure Apple investments deliver maximum value.

As an Apple Authorised Systems Integrator, Computacenter can advise organisations on assessing their readiness for DEP as well as supporting you through the Enrol, Setup, Configure and Assign stages that are required to deliver DEP.

Once enrolled into DEP, Computacenter enables you to benefit from simplified initial setup by automating mobile device management enrolment and supervision of devices during setup and enabling management to manage the devices without touching them.

We take a flexible and holistic approach to helping organisations to deliver their users - employees, customers and partners - a modern, mobile work environment, and to link this security to their back-end.

Our services and skills will accelerate deployment, simplify management and strengthen security so business benefits can be quickly realised. All services are based on repeatable processes and transparent commercials that ensure predictable outcomes.

What are the next steps?
