## Assuring security, compliance and control across the network

Cisco Identity Services Engine (ISE) delivers unmatched visibility into who and what is on the network. Cisco TrustSec provides segmentation without network redesign, while Cisco Stealthwatch accelerates threat detection and response.

## Securing users in rapidly expanding perimeter

Enabling secure anytime/anywhere access for today's users, Cisco AnyConnect delivers visibility of device and user behaviour, enforces policy and offers best-in-class endpoint security. Cisco Advanced Malware Protection (AMP) for endpoints boosts protection – preventing threats at point of entry.

## Turning threat data into actionable intelligence

Cisco Stealthwatch is tuned to extract the insights customers need: turning the mass of security data into actionable, contextual intelligence critical for enterprise-wide protection. Like all Cisco security products, this capability is underpinned by the flow of threat intelligence from the researchers, data scientists, and engineers of Cisco's global Talos team.

## Securing workloads and apps in multi-cloud environments

Assuring visibility of all workloads and applications in public and private multi-cloud environments, Cisco Tetration works in tandem with the wider security portfolio to deliver comprehensive workload protection for multi-cloud Data Centers. For securing cloud users, Cisco Umbrella, the first secure internet gateway in the cloud, defends against the latest internet-based threats.

## Consolidation to reduce costs and increase operational effectiveness

As attacks become more complex, Cisco's architectural approach enables consolidation and/or integration of multiple point products to accelerate attack detection and remediation. Cisco Threat Response automates integrations across selected Cisco security products, while Cisco pxGrid (Platform Exchange Grid) enables multiple security products to share data and work together.
